What is occurring in this industry is too many bloggers and too many marketers that are spending money to promote their blog and email campaigns and are failing. The statistics in this section deal with: How many blogs are being started each year? How many blogs are being started each week? How many blogs are being started each day? How many articles are being written each day? What is the % of posts that are being shared on facebook, twitter, & pinterest? How many people are using blogs to market their business? How many people are receiving an email blast from their blog? What does the growth rate of blogs need to be in order to be considered profitable? If we look at some of the statistics we find that the number of blogs being started each year has been flat since 2009. According to Paul Glastonbury there are 73.82 million blogs today. This number was 74.3 million in 2010. It is 79.2 million in 2011, and 80.2 million in 2012. That is up 7.2% in only 1 year. The number of blogs being started each week has been steady since 2009. Paul Glastonbury says there are 7.7 million blogs being started each week. We have seen a decline from 2008 when there were 9 million blogs being started each week. This is down from 9.5 million in 2009 and 10 million in 2010. The latest statistics are that we are at 6.8 million. The number of blogs being started each day is also a flat trend from 2009. On average there are 62.7 million blogs being started each day, which is the same number as in 2009. If this number can hold steady each day, this is a good news story.
