Here are the details for using this important application. User: No user

defined. User-name: No user defined. Start-date: No user defined. End-date: No user defined. Extract All: This method works well with the built-in Faxer software.

When the Faxer software is loaded into the system, each fax message is stored in the "Inbox" folder in the Temporary folder.

When the Faxer software is unloaded, the "Inbox" folder is deleted from the

Temporary folder and the Inbox folder is deleted from the system. To export the

entire fax, open the Faxer software and choose "Export All", then choose the

destination directory and file name and

click "Export". If necessary, use "Open"

and "Export" to move files to the correct

location. As mentioned earlier, the Faxer software is temporary. If the Faxer

software is opened but the "Inbox" folder does not contain any faxes, it may be that

the "Inbox" folder was deleted by the

Windows Operating System. If the "Inbox" folder is empty, go to the "Temporary" folder and delete the "Inbox" folder. The Faxer software will be free to export again.

Un-installer: Go to the Start Menu and open the "Programs and Features" app. Uninstaller is displayed. If this button is not displayed, go to the Start Menu and open the "Control Panel" app. Click "Uninstall a Program" and select "Uninstaller". It is not always possible to uninstall the Uninstaller. It is a prerequisite that the Uninstaller app is already installed.

Options: The "Log Files Options" dialog box displays the current settings. To change the settings, you can choose Yes or No. It is not always possible to change the settings. It is a prerequisite that the "Log Files Options" dialog box is already displayed.

Perform a scan: Perform a scan of the computer and all attached drives for

your company's confidential documents, Web sites, active applications and files. This software looks for viruses, trojans and spyware. Use the following steps to check for viruses on your computer. Start the Windows Explorer, then double-click the "Computer" icon, then double-click "My Computer". Right-click the " 81e310abbf

BCM Call Logger is a simple-to-use application that can extract information from BCM telephone systems and put together reports. This data can be then exported to a database file compatible with Microsoft Access for closer inspection. Get call logs from BCM telephone systems Setting up this tool doesn't take long. However, make sure that your computer has .NET Framework installed or it won't

work. The interface is user-friendly, based on a wizard where the call logging app guides you every step of the way. You can get started by putting together a new database in MDB format, which can be later opened to fill it with new data. Those interested in configuring advanced database settings can specify the custom connection string and connection type (OLEDB or ODB). View recorded calls and process files manually or automatically. In the following wizard step, you can tell the app where you want it to save the log files. Next, you gain access to the main app window and check out the calls reported by BCM Call Logger, including quick stats with the total calls logged, files parsed, incoming and outgoing time. It's possible to manually process files in the "Process Call Data" tab, as well as to set the preferred log file format (auto, Norstar All

/ CLID, Nostar Real Time, SL-1) and date format (auto, US, UK). Export logs to MS Access database files Furthermore, you can indicate the time period (all available dates, last month, within a specific time range) and call types (incoming only, outgoing only, both). There are four kinds of reports that can be built: overview, extension summary, line summary, and call detail. All aspect considered, BCM Call Logger offers a simple solution and plenty of configuration settings to help you extract call logs from BCM telephone systems and save this information in databases. This computer code (in.NET) will extract the Call Ids that are received from your Avaya phone system. This is of great use for Audible telemarketing, as well as for providing a quick way to export call logs for reports and viewing. You need to enter the phone extension you wish to

download the logs from, the path of the SD card where you wish the file to be saved, and the name you wish the file to be saved as. You can choose the date range to extract the logs from or choose to just download the data for today. For example, in order to download the logs for July 2 - July 7, 2012 (12 weeks, 7 days), enter the extension 1-6, SD card location, and name the log file July_2_2012.CSV, then click the "Import" button. If you wish to download logs for other periods, then enter a different extension
