

Heading/H1 Cad Cam By Ibrahim Zeid Pdf Free Download Cad Cam By Ibrahim Zeid Pdf Free Download Chapter 6 10 FRAMES AND JOINING, ENGINEERING SYSTEMS, USES OF JOINING THE COLUMN, Z-RAILING, Z-RETRACTABLE TRAPEZOID 10 FRAMES AND JOINING, ENGINEERING SYSTEMS, USES OF JOINING THE COLUMN, Z-RAILING, Z-RETRACTABLE TRAPEZOID 10.1 Frames 10.2 The column 10.3 Joining 10.4 The use of joining 10.5 Z-railing 10.6 Z-retractable trapezoidal There are more than 70 structural systems in use in buildings, all of which can be designed in Cad CAM. There are many structural systems that have been successfully used, but this book concentrates on those that are the most useful to designers and engineers. 10 Frames and Joining The advantages of structural systems are that they not only add to the dynamic performance of a building but can also be used to provide space flexibility. 10 Frames and Joining 10.1 Frames Frames are very useful in the design of a wide variety of structures such as floor systems and partitions. Frames are designed using a series of individual elements, linked together by joints. 10.2 The column A column is a very fundamental element of any structural system, and is used to support many types of wall. 10.2 The column The column is defined as a member which extends in length along a plane of reference without any structural member below it. In this book, a basic column is divided into two, the central core and the key beam. 10.2 The column 10.2.1 Central core As shown in Figure 6.1, a column is considered to be a two-dimensional structure and is a member which extends in length without any structural member below it. As a member, the column must be defined with respect to the frame on the upper and lower sides to define the core. 10.2.2 Key beam The key beam is used at the bottom of a column to transfer the load from one member to another member. It is a horizontal member, usually long and often rigid 6d1f23a050
